### SUMMARY

IT & Network Engineer with good experience in providing solutions, implementation, network designing, a configuration of Cisco routers and switches, troubleshooting of complex networking system. Experience in designing, configuring, implementing and testing of LAN, WAN, Ethernet, Frame Relay and IP routing protocols such as OSPF, IGRP, RIP, BGP, EIGRP. Worked on network topologies and configurations, TCP/IP, UDP, Frame Relay, bridges, routers, Token ring, Experienced IT data center technician with emphasis on backups, monitoring and reporting. Analytical and detail-oriented problem solver with IT experience. Self-motivated; comfortable taking initiative and working independently with supervision

### hubs, and Switches.

### AREAS OF EXPERTISE

- Data Center technician,
- Network Design, Planning & Maintenance
- Network Security,
- IT Project Management
- Solar system project,
- VoIP Network Engineer & ip camera , fire alarm system

### EXPERIENCE

I tech Yemen. 2009- 2015 - GS corporation 2016 -

#### Aman Future company Present

Providing technical knowledge and insight to current and future operations planning.

- Directing and designing network diagrams to meet and exceed mission standards.
- Integrating and seamlessly tying in networks and hardware .
- Maintaining current WAN/LAN networks, while configuring and adapting the network for future growth.
- Managing telecommunications, networking, satellite communications, and network security
- Maintaining network to accommodate current network traffic, upgrade current network redundancy and failover,
- Overseeing and providing leadership to a team of IT managers that provide signal and Data Center technician.
- Installing, implementing, and mounting racks, fiber patch-panels, terminating Cat5/ cat6 copper cabling and excellent knowledge of multi-mode and single-mode cabling usage patches panels.
- Have the ability to Design, coding, testing and debugging network platform according to detailed requirements.
- Excellent troubleshooting experience in routing, and switching infrastructure, and maintaining software application, in related tasks.
- Provide hands on support to customer and remote teams.
- Participate in team problem solving and root cause analysis.
- Demonstrate general knowledge and proficiency with computing and telecommunication technology and Corning, trunk etc

Responsible for monitoring data center systems, navigating multiple operating systems,

possessing a working knowledge of hardware, software applications and data center equipment.

- Performed data center equipment installs and maintenance tasks at multiple locations.
- Lead department technician for system backup configuration and troubleshooting issues.
- Led successful hardware migration effort for Symantec NetBackup environment.
- Coordinated with various IT department stakeholders to ensure business continuity during upgrades.
- Represented data center team on the IT Change Management Board.
- Presented all proposed changes from the group to the rest of the board for approval.

### Data Center Technician

ip camera & fire alarm system networking design and **Implementation.**

Implementation and supervision of solar energy systems of all kinds.

### PROJECT:

Senior of IT , Power and camera service of **HUAWEI**

For Huawei Yemen IT, Power and camera service project

### EDUCATION

**BA**

### SKILLS

Routing, Switching, VLANs, ACL Management, Network Security, Network Design, Network Access Control, Data Center, Design, Linux, Microsoft Server, HelpDesk

Microsoft Office, Windows Server 2008, Windows 7, Desktop Support, IT, Active Directory, Solar winds Orion, Vmware, Data Backup & Recovery. Ip camera & security system. Fire alarm system IT& Network wire/wireless design &implement.

Ip camera ,cctv network design &implement .

Fire alarm ,fire extinguisher design & implement .

Security alarm ,security system network design &implement.

Solar system project design & implement .

Power backup design & implement

Data center design &implement .

### LANGUAGES
