Saudi Council of Engineers Membership # 889187
Pakistan Engineering Council Membership # 39671

OBJECTIVE:

With over 10 years of experience as a QA/QC, Civil Engineer. I specialize in conducting thorough inspections to ensure construction projects adhere to plans, codes, and industry standards. My keen analytical skills enable me to effectively identify and resolve non-compliance issues, maintaining a strong focus on safety and quality throughout each project.

I have a proven track record in supervision, procurement, client interfacing, record-keeping, and problem-solving. I work closely with senior project managers to support project objectives and ensure seamless execution, from estimating and structuring layouts to overseeing construction site management. My expertise in Senior Civil Engineer, construction inspection, and project execution spans diverse infrastructure projects, including critical works for Saudi Electricity Company, Public Works Authority (Qatar) and USAID-funded school construction.

SKILLS:

- Project Execution & Management.
- Construction Management-Civil Works.
- Finishing works.
- Construction Supervision
- Fit out projects
- MS Excel
- All types of laboratory testing i.e. Soil tests, Steel tests, concrete tests etc
- Quality Assurance & Quality Control.
- Supervision of Concrete Structures (Super & Sub structures)
- Site Supervision & Field Review.
- Construction Management
- Autocad
- MS Office

MAJOR PROJECTS:

09/2020 – 06/2025	project Position Client Consultant	Distribution of Electric Network Grounding in Hail, KSA QC Civil Engineer Saudi Electricity Company Saud Consult
07/2017- 07/2020	project Position Client Consultant	The Construction of Al Bustan Street South (P007 C5 P1) Qatar QC Civil Engineer Public Works Authority of Qatar Parsons Corporation
03/2015- 05/2017	project Position Client Consultant	Construction of Higher Secondary School Civil Engineer USAID, Pakistan NESPAK

CAREER EXPERIENCE

QC Civil Engineer

Khalifa Muhammad Al-batea Contracting Company (KSA)

September 2020 – Jun 2025

Responsibilities:

- Conduct regular inspections of construction sites to ensure that the work is being carried out according to approved plans and specifications.
- Inspect materials used in construction to ensure they meet quality standards and specifications.
- Verify that work is executed in accordance with IFC drawings, method statements, and technical specifications.
- Monitor construction processes to ensure the quality of materials, methods, and finishes.
- Issue and track Non-Conformance Reports (NCRs) and corrective actions.
- Review and verify Material Inspection Requests (MIRs) and Inspection Requests (IRs).
- Ensure that materials delivered on site are tested, approved, and stored correctly.
- Conduct daily site inspections of civil works including earthworks, concrete structures, retaining walls, pavements, and foundations.
- Inspect formwork, rebar installation, concrete placement, backfilling, and compaction activities.
- Interface with the QA/QC Manager, Project Engineers, Site Supervisors, and Contractors.
- Coordinate with consultants or clients during inspections and handovers.
- Provide technical guidance and quality-related feedback to site teams.
- Prepare daily inspection reports and maintain records of all quality control activities.
- Ensure all work complies with applicable codes (e.g., ACI, ASTM, BS, ISO) and project specifications.
- Verify that construction activities are performed in accordance with the Quality Management System (QMS).
- Support audits and participate in quality meetings and inspections.
- Coordinate with third-party laboratories for field and lab testing of concrete, soil, asphalt, etc.
- Witness and verify tests like compaction tests, concrete slump tests, cube/cylinder strength tests, and more.
- Assist the Resident Engineer and Civil Engineer in reviewing contractor submissions and resolving technical site issues.
- Document non-conformances and follow up on corrective actions.
- Maintain comprehensive records of inspections, test results, daily activities, and progress.
- Ensure that site activities meet health, safety, and environmental requirements.

QC Civil Engineer

Boom Construction Company (QATAR)

July 2017 – July 2020

Responsibilities:

- Inspect the construction site for compliance with approved plans and project specifications.
- Ensure work is being carried out according to safety standards and regulations.
- Verify construction activities like excavation, formwork, steel reinforcement, and concrete pouring.
- Verify that construction materials meet project specifications and standards.
- Check the quality and condition of materials delivered to the site.
- Monitor the progress of construction work to ensure it follows the approved schedule and quality control plans.
- Report any discrepancies or delays to the project manager or supervisor.
- Conduct or coordinate laboratory tests for various materials like concrete strength tests, soil compaction tests, and other required quality tests.
- Collect samples and send them to certified laboratories for testing.
- Analyze test results and compare them with project specifications.
- Maintain detailed inspection logs and quality control reports.
- Prepare non-conformance reports (NCRs) when work does not meet quality standards.
- Track and resolve any non-conformities, suggesting corrective actions if necessary.
- Ensure that the project complies with local, state, and federal construction codes, standards, and regulations.

- Provide guidance on the proper construction techniques and material use.
- Assist in troubleshooting and resolving any issues that arise during construction.
- Work closely with project engineers, architects, and contractors to ensure that the project meets design.
- Ensure the construction site adheres to safety and environmental regulations.
- Inspect safety measures like scaffolding, protective barriers, and other equipment used on site.
- Conduct pre- and post-construction inspections.
- Ensure that proper maintenance practices are followed throughout the construction phase.

Civil Engineer

Asmat Ullah & Brothers – Govt Contractor Engineers and Consultants (PAK)

March 2015 – May 2017

Responsibilities:

- Oversee day-to-day construction activities on the site.
- Ensure work is carried out according to the approved drawings, specifications, and timelines.
- Monitor labor, material usage, and equipment on site.
- Coordinate with architects, structural engineers, contractors, and subcontractors.
- Assist in scheduling project timelines and ensure adherence to deadlines.
- Inspect materials and workmanship to ensure they meet required standards.
- Conduct regular site inspections to maintain quality and safety.
- Ensure adherence to local codes, safety regulations, and environmental standards.
- Implement safety protocols and ensure all workers adhere to them.
- Conduct toolbox talks and safety briefings.
- Identify and resolve any technical or site issues promptly.
- Liaise with stakeholders to find solutions and keep the project on track.
- Attend site meetings with clients, consultants, and project managers.
- Communicate progress and any deviations from the plan.
- Maintain site documents and records for audits and reviews.
- Take site measurements for work progress and billing.
- Prepare daily/weekly progress reports.
- Ensure adequate supply and use of materials, equipment, and labor.
