QC ENGINEER - ARCHITECTURE / STRUCTURE

PRESENT

Al Majal Al Arabi Construction Company | Riyadh

Key Responsibilities as a QC Engineer:

- Oversee and manage all QA/QC functions on the project across all disciplines (Civil, MEP, etc.).
- Supervise and control the activities of QC Inspectors, ensuring adherence to standards and procedures.
- Liaise directly with Clients for inspections, approvals, and resolution of quality issues.
- Ensure implementation of the Company's QMS in accordance with ISO 9001:2015 standards.
- Ensure that all project specifications, ITPs, Method Statements, and Checklists are updated and followed.
- Conduct Field Density Test (FDT), carried out by using sand replacement method and core cutter method as part of soil compaction verification
- Conduct and monitored concrete testing including slump test, compressive of concrete cubes, and core test to ensure mix design compliance.
- Conduct Non-Destructive Test (NDT) on concrete structures including rebound hammer tests, ultrasonic pulse velocity (UPV), and core extraction for structural evaluation.
- Conduct internal and external audits, analyze results, and ensure effective closure of NCRs and observations.
- Maintain regular reporting of Quality Status, Non-Conformances, Quality KPIs, and root cause analysis.
- Conduct seminars and in-house training sessions for Quality staff and site teams to promote awareness.
- Prepare and review Inspection Test Plans (ITPs), Method Statements, and relevant QA/QC documentation.
- Conduct inspections for incoming materials and site activities such as:
 - Excavation, base compaction, blinding, formwork, rebar, concrete pouring, and finishing.
 - Surface preparation, bitumen coating, backfilling, and general civil works.
