

ANSAR JAMIL

FA Technician Fire Alarm Fire Watcher

A **Fire Alarm (FA) Technician** is a specialized technician responsible for installing, testing, inspecting, maintaining, and repairing **fire alarm systems** in residential, commercial, and industrial buildings. Their job ensures that fire detection and warning systems are fully functional and compliant with safety regulations and local fire codes.

Installation:

- Install fire alarm panels, detectors (smoke, heat, CO), pull stations, and notification devices (strobes, horns, speakers).
- Route wiring and connect devices according to layout plans and schematics.

Maintenance & Testing:

- Conduct regular inspections and testing of systems to ensure functionality.
- Replace faulty components and batteries as needed.
- Test signal transmission to monitoring stations or fire departments.

Troubleshooting & Repairs:

- Diagnose and fix system faults or false alarms.
- Use testing equipment and diagnostic tools to find issues.

Compliance & Documentation:

- Ensure systems meet **NFPA 72, local fire codes**, and manufacturer requirements.
- Maintain detailed service records and inspection logs for fire marshal audits.

Customer Interaction:

- Explain system operations to clients.
- Provide reports and recommend upgrades or repairs.
