### Profile

---

Planning Engineer with **4+ years of experience** in infrastructure and commercial building projects. Demonstrates a strong passion and curiosity for construction planning and project management. Skilled in developing project schedules, monitoring progress, and ensuring timely delivery of milestones. Seeking a **challenging role** to leverage technical expertise and enthusiasm in contributing to the success of dynamic construction projects.

### Professional Experience

---

**Planning Engineer, Almabani General Contractors** *📍*

2024 – present  
Riyadh, Saudi Arabia

- **Roles & Responsibility- (report to Planning manager)**
- Develop comprehensive project schedules using Primavera P6, ensuring alignment with project scope and timelines.
- Experienced in resource allocation and loading in Primavera P6 for efficient project planning.
- Create baseline schedules and resource histograms to establish project benchmarks.
- Identify and analyse the critical path to optimize project execution and mitigate delays.
- Update schedules regularly to reflect actual progress and forecast future performance.
- Track project KPIs and monitor earned value to assess progress against plan.
- Issue progress trackers and highlight potential delays to site teams and Project Directors for timely corrective actions and recommended alternative work fronts to mitigate delays and achieve project Monthly Targets.
- Developed standardized formats for weekly and monthly reports based on client/consultant requirements and ensured timely updates and reporting.
- Conduct site visits to gather real-time updates and validate reported progress.
- Collaborate with Construction Managers to prepare lookahead schedules for upcoming activities.

- Support the planning department by collecting data, conducting analysis, preparing reports, and fulfilling departmental requirements.

**Jr. Planning Engineer (2 years of Experience), URC Construction Pvt Ltd**

2022 – 2024  
Chennai, India

- **Roles & Responsibility- (report to project manager)**
- Assisted planning manager in developing project schedules/programmes and progress monitoring.
- Generating schedules and programs for the upcoming month while aligning them with the planned percentage in the construction progress S-curve.
- Projecting the man power required for the upcoming planned month with respect to all trades.
- Establish productivity norms for all trades and disciplines in coordination with construction team and creating macro schedule for each storey in the building at handover stage to track the project in detail.
- Conduct meetings with site team to address the Request for Information (RFI), elucidating the target for the month, inquiring about any dependencies necessary for target achievement, resolving any identified dependencies, and ensuring a smooth and obstruction-free work environment.
- Participating in all site coordination meetings, subcontractor meetings, progress meetings, and client meetings.
- Updating the Master Schedule in Microsoft Project (MSP) at the end of each month.

## Education

---
