## Duties & Responsibilities:

- Executed QA/QC inspections for dams, tunnels, spillways, high-rise buildings, and infrastructure works, ensuring compliance with project specifications, standards, and IFC drawings.
- Monitored concrete works, including formwork, rebar, embedded items, pre-pour and post-pour quality checks, slump tests, temperature control, and curing procedures.
- QA/QC inspections for wet utilities (stormwater, sewer, potable water, irrigation), covering trenching, bedding, pipe installation, chambers, compaction, and backfilling.
- QA/QC for road works and structures, including PSS substation civil works, bridges, culverts, and cable trenches, ensuring compliant concrete, rebar, formwork, and asphalt works.
- Reviewed BBS, method statements, ITPs, checklists, and technical submittals to verify quality benchmarks and inspection readiness.
- Managed QA/QC documentation, including WIRs, MIRs, NCRs, RFIs, and internal checklists; maintained digital records via ACONEX and project-specific platforms
- Oversaw quality compliance for specialized works like consolidation grouting, jet grouting, rock anchors, tunnel linings, and structural concrete elements.
- Coordinated with consultants and client representatives for inspections, approvals, and closure of non-conformities within required timeframes.
- Conducted incoming material inspections for civil items such as concrete, steel reinforcement, waterstops, and formwork systems per project and ASTM standards.
- Participated in quality audits, root cause analysis, and implementation of corrective and preventive actions (CAPA) to improve site quality culture.
- Supported subcontractors in aligning with QA/QC procedures and site safety protocols, ensuring adherence to project quality goals.
- Prepared daily quality reports, inspection logs, and documentation for project handover and final QA/QC dossiers.
