

ABBAS MANAN

CIVIL ENGINEER

PROFILE SUMMARY & CAREER OBJECTIVE

A dedicated and experienced Senior **Site Engineer – Civil** with over four years of hands-on experience overseeing diverse construction and infrastructure projects, including buildings, roads, and bridges. Well-versed in construction standards, quality control procedures, and safety regulations, I bring a proactive and detail-oriented approach to ensuring compliance with project specifications, drawings, and applicable codes. Energetic and committed, I aim to contribute meaningfully to a reputable organization that values construction excellence—leveraging my technical skills, site supervision experience, and keen eye for detail to support successful project delivery while continuing to grow professionally.

PROFESSIONAL & EDUCATIONAL QUALIFICATION

- B.Sc (HONS Civil Engineering)
- **Diploma of Associate Engineer (Civil)**
- IOSH International General Certification in Occupational Health & Safety

- Comprehensive problem solving abilities
- Hardworking & sincere
- Strong sense of responsibility
- Good team player
- Perseverance & strong will
- Logical & versatile
- Good decision making & analytical skills

DUTIES AND RESPONSIBILITIES

- Supervised and monitored site activities to ensure work execution was aligned with approved drawings, specifications, and quality standards.
- Managed daily civil construction operations including concrete works, excavation, backfilling, formwork, rebar placement, and structural installations.
- Coordinated with subcontractors, site supervisors, and project managers to ensure timely and efficient progress of construction tasks.
- Conducted inspections of ongoing works to ensure compliance with project requirements and industry standards.
- Prepared daily progress reports and site documentation for review by project stakeholders.
- Reviewed construction drawings and raised RFIs (Requests for Information) for any discrepancies or clarifications.
- Assisted in quantity take-offs, material estimation, and ensuring availability of required construction materials on-site.
- Verified that construction works were executed within the allocated budget and monitored usage of manpower, materials, and equipment.
- Liaised with consultants and clients during inspections and addressed their comments or concerns effectively.
- Ensured proper execution of civil works such as foundation construction, slab casting, structural steel erection, roadwork, and drainage systems.
- Supported quality control processes by coordinating with QA/QC teams and ensuring proper testing and documentation of materials and works.
- Monitored subcontractor performance and ensured adherence to construction schedules and timelines.
- Prepared and reviewed bar bending schedules (BBS) and ensured reinforcement was placed as per structural requirements.
- Coordinated utility installations such as water supply lines, sewerage networks, and electrical ducting as per project specifications.
- Assisted in resolving technical issues encountered on-site by proposing and implementing engineering solutions.
- Participated in project meetings and provided updates on progress, challenges, and resource requirements.
- Maintained project records, including site instructions, measurements, and material deliveries.
- Ensured that work was completed with high standards of workmanship and complied with local construction codes and regulations.
