

Basel Riyadh Al Thanon

FULL STACK DEVELOPER / DATA VERIFICATION SPECIALIST

baselzanon8@gmail.com | [+966553008944](tel:+966553008944) | [LinkedIn](#) | [GitHub](#)

Professional Summary

Multidisciplinary professional with experience in full-stack development and real estate data verification. Skilled in building bilingual (Arabic & English) web and mobile applications using Flutter, Laravel, and the TALL stack, while also supporting land valuation processes through accurate data entry, document review, and appraisal verification on the Taqueem platform. Brings a strong balance of technical expertise, analytical thinking, and operational precision to fast-paced environments.

Experience

Menassat Company, Real Estate Appraisal Associate

2025-Present

- Managed and verified land and property data to ensure accuracy and completeness before submission.
- Reviewed appraisal information provided by evaluators and cross-checked details for compliance with company guidelines.
- Performed comparisons and reconciliations between different valuation inputs to ensure consistency.
- Prepared and submitted appraisal requests on the Taqueem platform.
- Collaborated with evaluators to correct discrepancies and ensure high quality appraisal reports.
- Maintained organized digital records and supported internal workflow efficiency.

Projects

E-Shop | E-commerce App

- Developed an e-commerce application using Flutter to display products and categories fetched from the Fake Store API.
- Managed app state with the Provider package and implemented multi-language support in Arabic and English using intl and localization.
- Integrated Lottie animations to enhance user engagement and created dark/light mode themes for improved user experience.
- Utilized Shimmer for loading effects, providing a smooth transition during data fetching.
- Employed the Hero widget for seamless animations between screens, enhancing the overall visual appeal.

SyriaJoy | Booking App

- Developed a booking application that allows users to browse and book trips while viewing company profiles and ratings.

- Enabled companies to manage trips and respond to user inquiries through the app, facilitating communication between users and companies.
- Allowed users to search for trips and save their favorite trips for easier access.
- Enabled multi-language support for Arabic and English users, enhancing accessibility and user experience.
- Customized the app icon to align with brand identity and improve user recognition.

Boz | E-commerce Store App

- Designed and developed REST APIs for managing products, categories, and user actions.
- Created migrations and models for structured data management, ensuring efficient relationships.
- Implemented a user cart system, improving tracking of active carts and order quantities.
- Established an order system to verify product availability before purchase.
- Developed an admin dashboard using the Filament package, streamlining management with secure access for various user roles.
- Utilized policy-based authorization for admin roles, enabling secure management of user actions and data.

Postify | social media Posting App

- Designed and developed REST APIs for post creation, editing, and viewing, incorporating validation rules for data integrity.
- Integrated Sanctum for secure authentication and email verification processes.
- Implemented password reset functionality and sending emails using Mailable for enhanced user experience.
- Sent emails with post details upon creation, ensuring users are informed of their submissions.
- Established search functionality using Scout with Meilisearch for efficient, typo-tolerant searches.
- Built an admin dashboard utilizing the Filament package, facilitating management of posts, users, and categories with role-based permissions, translations, and theme customization.
- Applied policy-based authorization to restrict post editing and deletion to the original creators, ensuring data security.
- Utilized observers to manage image deletions, maintaining consistency between posts and associated files.

MedicalCare | Medical Management Platform

- Developed both the admin dashboard and RESTful APIs to manage users, medications, and orders efficiently.
- Built the dashboard using Filament, enabling full CRUD operations for administrators with bilingual support (Arabic & English), integrated charts to display medicine statistics, and implemented role-based access controls to limit functionalities based on user roles. Implemented sending emails using Mailable for enhanced user experience.
- Leveraged database notifications and integrated Pusher to deliver real-time alerts to admins when a user places an order via the API.
- Designed API endpoints for user management (registration, login, edit, delete, view), medicine and category browsing, cart and order operations, and user medical history tracking.

E-Lango | Educational App for Children

- Developed backend systems to store user data, levels, questions, and answers for various game types.
- Managed file storage for reference content, including animal images and audio files, enabling users to hear sounds and read facts.
- Established relationships between tables to effectively organize user progress and educational content.

- Implemented a reference table for non-game educational resources, enhancing the learning experience.

Hadaf | Warehouse Admin Dashboard for Hadaf Al-Jazeera Company

- Utilized Filament to create an admin panel for managing employees, orders, products, and other business workflows.
- Implemented Excel import functionality to bulk upload product data, allowing efficient addition of multiple products from a single file.
- Generated Excel reports for detailed analysis.
- Built a bilingual interface supporting both English and Arabic languages to cater to diverse users.
- Designed a role-based access control system enabling granular permissions; different roles allow varied levels of access and operations, ensuring secure and efficient management.

Zool | Portfolio Website

- Built a responsive company portfolio website for Zool using WordPress, focusing on clean presentation and usability.
- Customized the theme and layout to align with the company's branding and ensure a smooth user experience.
- Optimized site performance and mobile responsiveness for better accessibility across devices.

Certifications

Flutter Bootcamp Certification

2024

Issued by Developer Student Clubs, King Abdulaziz University

Education

YPU University, BS in Information and Communication Engineering

2024

Major: Information and Communication Engineering | Minor: Software Development

Skills & abilities

- **Technology & Systems:** Full-Stack Development (Laravel, Flutter, TALL Stack), Database Management
- **Data & Documentation:** Data Entry & Verification, Documentation & Reporting, Appraisal Support
- **Analysis & Quality:** Attention to Detail, Analytical Thinking, Problem Solving
- **Collaboration & Workflow:** Team Collaboration, Workflow Coordination, Time Management, Adaptability

Languages

- Arabic: Native
- English: Professional proficiency
